

# Residential Intelligence

## 1. Developments in Smart Homes and Smart Living

Dr. Ad van Berlo  
Smart Home Foundation, Netherlands

## 2. Home Network: Road to Ubiquitous Home

Dr. Paul Yonghwan Kim  
LG Electronics, Korea

## 3. Information Appliance Computing for a Better Life

Dr. Miwako Doi  
Toshiba, Japan

Ladies and gentlemen,

thank you for joining our fourth and last session of this congress. My name is Nagasaka from Sumitomo Electric Industries.

Yesterday and this morning we had an update on broadband networking. Because of the development of that technology and of digital devices, we think it is now time to talk about home intelligence, maybe with sophisticated applications.

We have 3 outstanding speakers. They are specialists in their field. Let me introduce our first speaker, Dr. van Berlo from the Netherlands. He is a well-known pioneer of smart homes. He started his first smart home in 1992 and he established the Smart Home Foundation in 1997. He has an engineering and biomedical background. He focuses on the technical solutions of smart home applications, especially for senior and disabled people.
