

Russian Perspectives

Session Chairman

Prof. Dr. Grigory Svalov

First Deputy Director General

VNIIEP, JSC All-Russian Scientific R&D Institute, Russia

Good morning Ladies and Gentlemen,
now we want to start with session I, which is devoted to the situation in distribution and generation of electrical power for Russia. Then we will consider the same subject as it pertains to the situation in Moscow, which is as a megacity. This will be followed by a look at the situation in telecommunications. The final report will deal with the situation of the cable industry in Russia.

Our first speaker should have been Mr. V. Y. Sinyugin, who is the Deputy Minister of Energy of the Russian Federation. Unfortunately, Mr. Sinyugin cannot be with us this morning, therefore Mr. Salikhov, the head of the department of energy in the Ministry of Energy, will give his presentation. In our country we have different points of view on the subject of energy. His report seems to me the most realistic one. Mr. Salikhov please start your presentation.
